Kubernetes Release Team Shadow Application Report for the release cycle 1.XX

Introduction

Hello and welcome to the release-team-shadow-stats report for the release cycle 1.XX. This document should report the current status about the release team shadow application program which is open to apply for before a Kubernetes release cycle starts, you can read here more about the release team shadow application program.

The charts are structured in two sections, the general charts with all applicants in scope and more specific charts for each team.

- General charts
- Team charts

If you have any questions or suggestions to improve this report feel free to reach out to `#sig-release` / `#contribEx` on Slack or just open up an issue in the release-team-shadow-stats repo and tag one of the owners 😃. Thanks!

CI Signal

> The CI Signal [role responsibility] is to foster a culture of continuous test integration, fail-fast and fix-fast mindset and strive for continuously passing tests that provide true positive signal to the release team. To ensure that releases go out on-time with high quality it is absolutely critical to maintain a sustained focus on test health through the entire release cycle, as opposed to accepting destabilizing test failures during active enhancement development followed by a long test stabilization phase.

Documentation

> The Docs [role] is responsible for working with the Release Team to coordinate documentation updates for the next Kubernetes release. [Which include a number of tasks like]: identifying and tracking new Kubernetes features and feature updates that require new content as well as offering guidance to code contributors about where new feature and enhancements documentation should live among other things

Release Notes

> The Release Notes role is responsible for collecting and fine-tuning release-notes from the many contributions to Kubernetes between release cycles. This role is likely to find that work during the first several weeks of the release cycle is very laid back with the bulk of the tasks being completed at the end, once the release is firmed up.
